The invention relates to an isolated polypeptide associated with cell growth, differentiation and death (GGDD). Also disclosed are the growth, differentiation and death (GGDD). Also disclosed are the polymelectides encoding the polypeptides. The polypeptides and conditions associated with the decreased expression or over expression of CGDD. Such diseases include cell proliferative (e.g. expression or over cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and reproductive disorders, or disorders of the placenta. They are also reful in assessing the effects of exogenous compounds on the expression of muclaic acid and amino acid sequences of GGDD. The CGDD or its confined acid and amino acid sequences of GGDD. The CGDD or its agonist or antagonist of the polypeptides, or in altering the expression of the target polymulectide and compounds that specifically bind to or of the target polypeptide and compounds that specifically bind to or of meaning the expression of procein-protein interactions, drug-target in monitoring or measuring procein-protein interactions, drug-target in monitoring or measuring corporates in profiles. Sequences given in records AAR69667 expression profiles. Sequences given in records AAR69667
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human proteins associated with cell growth, differentiation, and death (CGDD), useful for diagnosing, treating and preventing diseases conditions associated with the aberrant CGDD expression e.g. cancer, AIDS, or epilepsy.
         Human, cytostatic, antiarteriosclerotic, anticonvulsant, nootropic, neuroprotective, cerebroprotective; anti-HTV; antiallergic, antinflammatory, synaecological, cancer; atherosclerosis, epilepsy, Huntington's disease, erroke, AIDS, allergy; placenta, reproductive, CGDD, cell growth, cell differentiation; cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Azimzai Y, Baughn MR, Becha SD, Borowsky ML, Chawla NK; Elliott VS, Emerling BM, Gandhi AR, Gietzen KJ, Gorvad AE; Griffin JA, Hafalia AJA, Ison CH, Kable AE, Kalafus DP; Lebr-Mason PM, Marquis JP, Nguyen DB, Ramkumar J; Richardson TW, Sapperstein SK, Swarnakar A, Tang YT, Tran UK; Warren BA, Xu Y, Yao MG, Yue H, Yue H;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the protein sequence of GIP90, a novel 90 kDa Goodpasture antigen binding protein (GPBP) interacting protein. GIP90 cDNA was isolated following a yeast two-hybrid screen for GPBP interactive proteins and use of a partial clone to screen a human skeletal muscle cDNA library. The GIP90 gene was localised to chromosome 3 (3q12). Comparison of GIP90 cDNA and genomic sequences revealed the existence of an adenine at position 2720 in the cDNA that was not present in GIP90 genomic DNA. Another cDNA fragment was isolated that encoded a construction and translation of the GIP90 genomic sequence (i.e. no A720). GIP90/130 polypeptides interact with GPBP and are capable of construction and translation of the GIP90 genomic sequence (i.e. no A720). GIP90/130 aggregation. They can be used to modility GPBP-GIP90/130 interactions, to modily GP90/130 aggregation, and to modulate gene expression. The constitution provides GIP90/130 polypeptides, portions of them, antibodies, invention provides GIP90/130 polypeptides and nucleic acids as well as methods for treating an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130 polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PSGESEK----KTKKSVELSKEDLIQLLSIMEGELQAREDVIHMLRTEKTKPEVLEAHYG 115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Dp
                                          The present sequence is that of a 785-amino acid polypeptide that is present in the novel Goodpasture antigen binding protein (GPBP) interacting protein GIPP130 (Gee ABRE2251). The polypeptide lacks critical regions of GIPP9(130 polypeptides) implicated in GPBP interaction and induction of gene expression, but contains sequences that downergulate interaction with GPBP. The polypeptide, or antibodies to it, can be used to modify GPBP-GIP90/130 polypeptide interactions or to modify GIP90/130 polypeptides aggregation. The invention provides GIP90/130 polypeptides, portions of them, antibodies, nucleic acid sequences, expression vectors and host cells, as well as methods for detecting GIP90/130 polypeptides and nucleic acids, and methods for treating an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130 polypeptides
                                                                                                                                                                                                                                                                 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PEGGRSAFADRPASPIQIMTVSTSAAPTEIAVSPESQEVPMGRTILKVTPEKQTVPAPVR 1050

The present invention relates to a method for diagnosing breast cancer in a subject suspected of having endometrial cancer. The method comprises determining the expression of a set of human genes or expression products in an endometrial sample suspected of being cancerous. The human genes of the invention are differentially expressed in breast tumours characterised as high or low MAI (mitotic activity index). These sets of genes can be used to discrimiate between high and low MAI breast tumours. The invention also provides DNA and protein microarrays for analyzing the expression of the human genes and their protein products. The methods and arrays are useful for the diagnosis and prognosis of endometrial cancer, selecting and monitoring treatment regimes, and identification of compounds useful for the treatment of endometrial cancer. ANU84361 represent the human proteins of the invention that are differentially expressed in breast cancer tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosing breast cancer comprises determining expression of nucleic acid molecules or expression products that are differentially expressed in normal and malignant tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  248 MLVDERQMHIEQLGLQSQKVQDLTQKLREEEEKLKAVTYKSKEDRQKLLKLEVDFEHKAS 307

ACF12828 to ACF12947 encode the human cervical cancer marker proteins (I)
given in ABR92047 to ABR92164. A higher level of expression of (I) than
normal indicates the presence of cervical cancer. Also described: (I) a
vector (II) containing (I); (2) a host cell (III) containing (I); and (3)
assessing (MI) whether a patient is afflicted with cervical cancer,
comprising comparing the level of expression of a marker in a patient's
ample, and the normal level of expression of the marker in a control non
cervical cancer sample, where a significant increase in the level of
expression of the marker in the patient's sample relative to that in the
cervical cancer. (I) has cytostatic activity, and can be used in gene
therapy and in vaccines. (I) is useful in detecting, characterising,
creventing and treating human cervical cancers. (I) may also be used in
various prognostic assays, pharmacogenomics and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13;

Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.

Example 2; SEQ ID NO 6733; 10078pp; English.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic,

```
ί,
immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, cancer disgnosis and therapy, drug screening, and thrombolytic activity, cancer disgnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           60 PSGESEKKTKKSVELSKEDLIQLLSIMEGELQAREDVIHMLRTEKTKPEVLEAHYGSAEP 119

PUDICation No. US2030108554A1
GENERAL INFORMATION:
APPLICANT: Saus, Juan
APPLICANT: Revert-Ros Francisco
TITLE OF INVENTION: GIPE, a Family of Polypeptides with Transcription Factor Activity
TITLE OF INVENTION: Interact with Goodpasture Antigen Binding Protein
FILE REFERENCE: 98,723-F-US
CURRENT PILING DATE: 2002-12-04
NUMBER OF SEQ ID NOS: 38

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

e: difference at carboxyl end due to frameshift error
nent: This protein is found as flocculent material in the parasitophorous vacuole.
Arfamily: trichohyalin; calmodulin repeat homology

A;Title: Molecular cloning and expression of murine smooth muscle myosin heavy chains. A;Reference number: JC5420, MUID:97242182; PMID:9125171
A;Accession: JC5421
A;Molecule type: mRNA
A;Residues: 1-1938 <HAS>
A;Cross-references: DDBJ:DB5224; NID:91945079; PIDN:BAA19691.1; PID:91945080
A;Experimental source: smooth muscle
C;Comment: This protein plays a role in smooth muscle cell contraction.
C;Comment: This protein plays a role in smooth mostle cell contraction.
C;Comment: This protein heavy chain; myosin motor domain homology
C;Reywords: nucleotide binding; P-loop
F;88-771/Domain: myosin mctor domain homology <MMOT>
F;178-185/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1242 VLGQAKQEVEHKKKKLEVQLQDLQSKCSDGERARAELS--DKVHKLQ------nEVESV 1292

chain subunite (MHC), 2 alkali light chain subunite (MLC) and 2 regulatory light chain subunites (MLC).

chain subunite (MHC) is highly regetitive, showing cycles of a 28-residue repeat pattern composed of 4 heptapeptides, characteristic for alpha-helical coiled coils.

Characteristic for alpha-helical coiled coils.

(MHA) [MIM:155100]. MHA is an autosomal dominant macrothrombocytopenia characterized by thrombocytopenia, glant platelets and leukocyte inclusions.

Characterized by thrombocytopenia glant platelets and leukocyte inclusions. With additional alport-like clinical features of sensoriheural deafness, cataracts and nephritis.

Characterized by thrombocytopenia alport-like clinical features of sensoriheural deafness, cataracts and nephritis.

Characterized by thrombocytopenia, glant platelets and leukocyte characterized by thrombocytopenia, and nephritis.

Characterized by thrombocytopenia, giant platelets and leukocyte characterized by thrombocytopenia, and nephritis.
